# **10 Aphorisms**

For Saxophone Duo

Dedicated to Steve Stusek & Laurent Estoppey

## Explanations:

- These 10 Aphorisms are prepared in two separate versions. The first version contains playing microtonal deviations in the music. Although the second version does not contain playing microtonal deviations, it needs the soprano saxophone to be de-tuned 49 cents lower (almost a quarter-ton lower). Both of these versions are presented here. The sound results of each of these pieces are different, though.
- Because the pieces are composed according to the system of “difference-tone harmony,” playing the piece in the first version, which realizes this system more precisely, is preferable. Yet, due to the possible difficulty of playing microtonal deviations, the musicians should feel free to choose the second version, if desired.
- $\odot$  refers to the slap-tonguing.
- The trills should be played without after-beats.
- The speed of playing tremolos should not be taken literally as written. However, it is required that they be played as fast as possible.
- The tempi should not be taken literally. They are mere suggestions.

## Explanation for Version I:

- All the intended microtonal deviations seem to be possible to realize. The following is a suggestion for the only one, which seem to be slightly problematic:

### **Piece 11/10:**

Anchor index fingernail on F tone-hole while depressing key 4 with ring finger to play (lowered) G#. Use ring and pinky finger to depress keys 5 and 6 to play (lowered) F#.

- In general, the exact intonation of the microtonal deviations is not intended. However the distinction between 1/4-tones and 1/6-tones as well as the distinction between both of those and the normal tones are important.

## Explanation for Version II:

- In this version, the de-tuning of the soprano saxophone (49 cents lower) remains the same, throughout all the 10 short pieces.
